

# SELECTING THE PROPER TYPE / SIZE OF THE COVER

**Marked sizing** / types of covers are **orientational**. It is necessary to measure your steering wheel and select the best suiting type before purchase or assembly.

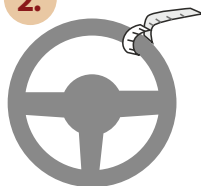

The sizes of the covers can overlap. If more than one type fits, choose the one that the **THICKNESS** of the steering wheel is **in the middle of the range**.

1.

Measure the **outer diameter** of the steering wheel. If it's not an exact circle, measure it on multiple places, and use the middle dimension.

2.

Use tailor's measure tape (or similar measure tape) to measure the **THICKNESS** of the steering wheel. Use your measures to select the type of the wheel – **thinner / thicker**.

Any sizing not included in the table can be custom made.

Covers marked with an X have thinner microporous rubber.

Incorrectly chosen type of cover:

- if smaller than suitable, the edges of the cover won't be tightened because the thread will be short
- if larger than suitable, the cover will be loose
